

NEW MANFROTTO COMPACT FAMILY

The new Compact product range aims to simplify the existing Compact and 390 series by reducing their complexity in terms of SKU's, to strengthen the family feeling and to introduce colours. By leveraging key and user-friendly innovations, the new range has been positioned to cover key strategic price points in the Consumer Electronics.

This new collection has been designed for photo enthusiasts who need a compact, lightweight and easy-to-use support to help them express their creativity to the fullest. Each model has unique key benefits that perfectly fit different user needs and different cameras.

COMPACT LIGHT

This is the lightest tripod in the Manfrotto range (just 800g/1.8lbs) and it is the natural connection between a mini and a full-size tripod. It has been perfectly designed to fit all Compact System Cameras and thanks to its compact dimensions and feather-lightweight, it is born to be with you always.

Key features and benefits:

- **Easy camera positioning:** the ball head and the single adjustment knob are the perfect solutions for quick positioning of the camera and easy locking of all movements.
- **Easy connection to the camera:** the universal 1/4" thread camera attachment and the new quick wheel allow the user to easily screw all imaging devices to the tripod.
- **Lightweight and portable:** it is a light, four-section tripod for minimum weight and maximum portability.

COMPACT ACTION

The Compact Action is made for photos and movies with its intuitive and extremely ergonomic joystick head. This tripod is the best choice for owners of entry level DSLRs with standard kit lenses who want to switch quickly and easily between photo and movie mode.

Key features and benefits:

- **Intuitive to use with great ergonomics:** the joystick head with scroll-wheel locking mechanism is very intuitive and easy-to-use. Its comfortable grip allows users to capture smooth movies and great images.
- **Easy set-up and camera positioning:** the innovative circular quick release plate is perfect for effortless camera attachment by hand without any need for coins or screwdrivers. Thanks to its shape, even the orientation of the quick release is no longer an issue. Users can simply close the lever just above the joystick handle in any position they like. This round quick release plate has a minimal design and its small dimensions ensure it looks good attached to your camera.

NEW MANFROTTO COMPACT FAMILY

- **Adaptability:** the regulating dial is one of the main innovations of the Compact Action tripod. Together with the round quick release plate it allows the user to perfectly adjust every camera to the tripod thereby enhancing its stability.
- **Perfect photos and movies:** the photo-movie selector allows maximum freedom in any circumstance. Switching to the desired mode only takes a second and ensures you always obtain great photos and smooth movies.

COMPACT ADVANCED

The Compact Advanced features an inventive foldable three-way head for great stability and accuracy in framing your subject. This tripod is target at more advanced photo enthusiasts who own an entry level DSLR with standard zoom lenses up to 200mm.

Key features and benefits:

- **Great precision and performance:** this three-way head has two independent, ergonomic levers. One controls both pan and tilt movement simultaneously whereas the second controls levelling. With these two control-levers the user can easily obtain level, well-framed images and regulate all movements independently.
- **Portable and compact:** this three-way head is specifically designed to minimise dimensions and maximise portability. A unique mechanism allows the levers to be folded when the head is not in use, making the tripod easier and more convenient to carry.
- **Stability:** The high performance three-way head combined with reinforced, five-section tubes make the Compact Advanced the optimal solution for rigidity whilst also being able to reach the superior height of 165cm/65in when extended.

COMPACT MONOPODS

The Compact range is comprised of two different models of monopod.

- **The Compact Monopod** is extremely portable and light-weight, perfect for shooting great pictures and movies in any circumstance with minimum effort. The ergonomic grip, made of a new softer material, and the wrist-strap ensure a safe hold and minimum risk of dropping the camera. It has been designed to fit the aesthetic and performance of any Compact System Camera with its universal camera attachment safely covered by the protective cap when not in use so that the metal is not exposed when in the bag.
- **The Compact Monopod Advanced** is the top-end monopod in the Compact range with a quick attachment system ideal for shooting photos and movies with entry level DSLRs with standard zoom lenses up to 200mm. The reinforced tubes and the five section design allow the user to reach a maximum height of 155cm/61 in guaranteeing great stability with compact dimensions.

NEW MANFROTTO COMPACT FAMILY

• MANFROTTO COLOUR EXPERIENCE

Thanks to the incredible success of introducing colour to the PIXI range, the Compact collection will now include pink-anthracite, white and red-anthracite colour combinations to complement the standard black. Each product has been engineered with attention to both functionality and design and the coloured material and details have been tested and selected with great care to realise an outstanding, high-quality product.

NEW MANFROTTO COMPACT FAMILY

ADDITIONAL ACCESSORIES

- **Padded carrying bag** – made from high-quality material, the carry-bag is tailor made for the user to transport their new Compact tripod. Its shape and dimensions maintain the portability and lightweight of this range of tripods. Moreover, the bag received is colour-matched to the tripod with which it is supplied.

- **Sony NEX-5R/5T adaptor** – these particular models have a very small surface area around the mounting thread. For this reason, in each Compact box, the user will find a special adaptor that will increase the surface of these specific cameras in order to better grip to the tripod and obtain maximum stability.

REPLACED ITEMS

The new Compact range replaces the existing Compact and 390 series.
